Previous Feedback

The last page of the survey offered people the opportunity to address any issues by writing in comments. These hand-written comments were copied and faxed back to your agency as they were received. The primary purposes for this action was to allow for immediate feedback from the people you serve, to give you the opportunity to make any necessary improvements, and to pass along compliments to your staff.

Sampling Methodology

Consumer Satisfaction Forms were given to people served by ADA and CPS during April 2001. For MRDD, data was collected through interviews.

People who received services from more than one program or agency received more than one survey. Therefore, some people completed more than one survey.

While this method may not have achieved a sufficient sample size to represent the opinions of all people who receive services from each provider, the survey has provided people with an opportunity to express their opinions and concerns. Giving the majority of people who receive DMH services a quick and simple way to express opinions and concerns about service quality is a major aim of this process.

Use of Data and Quality Improvement

The methods of data collection, the survey content and the survey results should all be considered in terms of quality improvement. The Missouri Department of Mental Health Satisfaction Survey has been designed as a quality improvement process, not as traditional mental health research.

There are two primary uses of this data. First, this data gives the Department of Mental Health an expression of the level of satisfaction of the people served by the Missouri DMH system as a whole.

Second, this data is designed to support quality improvement processes at the provider level. Each provider will have a basis upon which to compare the level of satisfaction of the people who receive services at their agency with other providers of their type and the state as a whole. This comparison makes it possible for each provider to improve the quality of the services they offer. In addition, each provider can get a clear idea of some of the issues that are important to the people they serve.

It is important to understand the context of services at each agency when interpreting the meaning of survey results. Differences in the population served at each agency, variations in service provision, and particular cultural characteristics of the community in which services take place must be taken into account as providers use this information to improve the quality of services. This report does not attempt to take into account these variations. As your agency engages in quality improvement, it is your responsibility to understand and take into account these local variations in order to make the most of the information contained within this report.

Please forward any suggestions for improvement of the survey process to Gary Harbison, Outcomes, Missouri Department of Mental Health, PO Box 687, Jefferson City, Missouri 65102. Additional information about survey results may be obtained by contacting Christine Rinck, Ph.D., University of Missouri-Kansas City Institute for Human Development, 2220 Holmes, 3rd Floor, Kansas City, Missouri 64108.
